BARCODE Advantage Program

Maintaining your product inventory takes time and energy. With our Barcode Advantage program, we can help make your ordering faster and your inventory organization easier.

REDUCE Errors   **SAVE** Time   **SIMPLIFY** Ordering

Here's How The Barcode Advantage Program Works:

NEEDS EXPLORATION

First, we meet with you to discuss your current methods of maintaining and replenishing your inventory, as well as common challenges you face. This helps us to uncover how our program can serve you best and provide insight into how we can customize it to suit your unique needs.

BARCODE GENERATION

In order to best address your company's specific challenges, your DSG team will develop a system of custom barcodes unique to your business for as many parts and products as necessary. We can print labels for you or simply email you barcodes. Many of our customers who utilize this program have us print their barcodes and then adhere them to shelving or packaging that is associated with the respective product.

ProntoForms™ App – Replenishment Form

BARCODE IMPLEMENTATION

Once you have the barcodes, your DSG representative will help you download a free, easy-to-use app called ProntoForms™. With this app, you'll be able to replenish your inventory quickly and easily. You simply take a photo of the barcode with your smartphone or tablet, type in the quantity you want, add any special comments or notes and then send your order to DSG. This eliminates the time spent manually recording the products you need as well as the miscommunication that can oftentimes occur while placing orders. Best of all, virtually anybody who is authorized at your office can now do the ordering – with very little training required!

TRAINING & SETUP

Our goal is to help you succeed, and while this program is easy to use, we'll gladly walk you through every step of the process and support you with any training that you may need.

CUSTOMIZATION

We're happy to customize this program in a way that serves your business best. One example might be to set up minimum and maximum quantity levels for each of your products that will help you to maintain the optimum number of parts or products that you keep on hand.
